Deliverable 6: Usability & Management Features (Task 6)

1. Objective

To provide a centralized management interface for scheduling updates, monitoring device health, and executing manual deployments with real-time feedback.

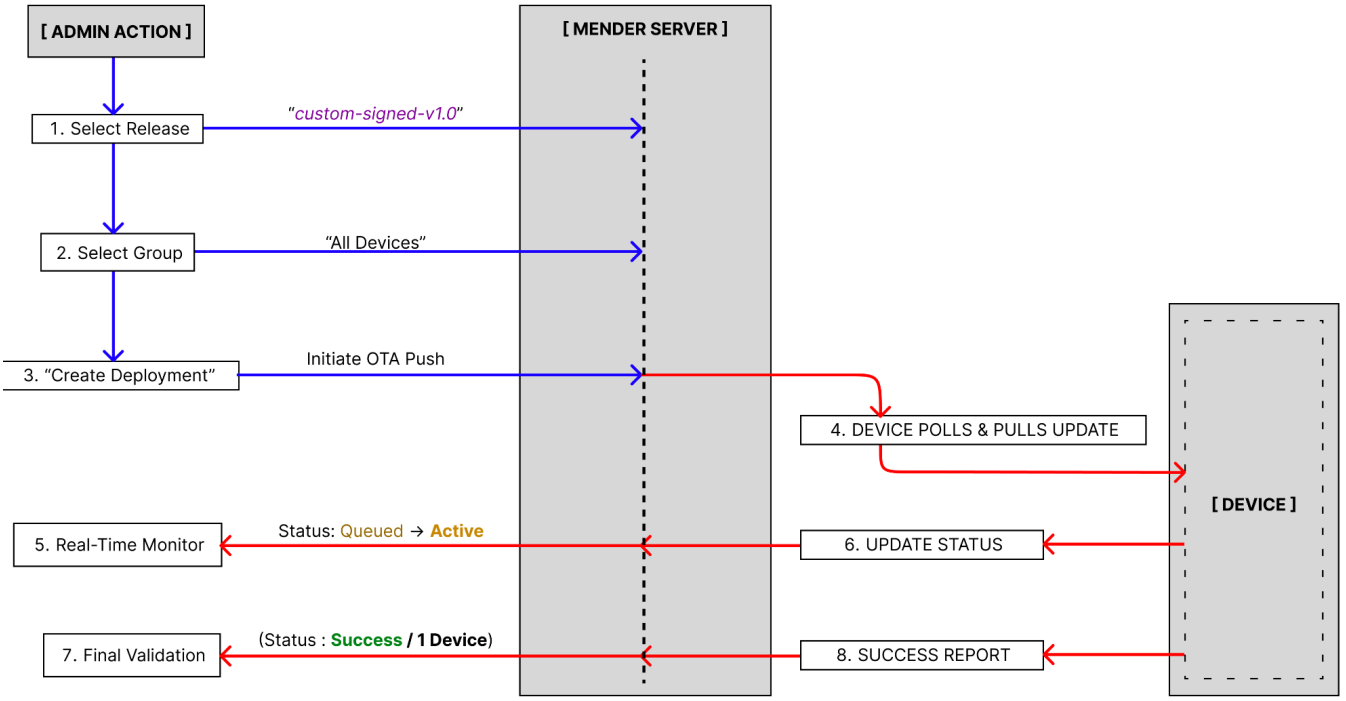

2. Management Dashboard Overview

This blueprint represents the functional layout of the Mender Web UI used to manage your `qemux86-64` virtual device.

MENDER MANAGEMENT CONSOLE	
SIDEBAR NAV	MAIN WORKSPACE / MONITORING
DASHBOARD	• Total Active Devices : 1 • Deployment Success Rate: 100%
DEVICES	• ID: qemux86-64 (Virtual) • Status: Accepted / Online
RELEASES	• Name: custom-signed-v1.0 • Payload: payload.sh (signed)
DEPLOYMENTS	• Active: custom-signed-v1.0 (In-Progress) • Finished: custom-signed-v1.0 (Green Check)

3. Deployment Scheduling & Monitoring

This tracks the user-driven workflow for initiating a manual deployment to the fleet.

4. Key Management Features

- **Inventory Tracking:** The system automatically categorizes devices by hardware type, ensuring the `custom-signed-v1.0` artifact was only sent to compatible `qemux86-64` virtual hardware.
- **Progress Monitoring:** The dashboard provides a granular view of the deployment progress, allowing operators to see the exact moment an update transitions from "Queued" to "Finished".
- **Manual Overrides:** Administrators have the capability to create manual deployments for specific troubleshooting scenarios or urgent security patches.
